I would like to emphatically voice my support for the following guidelines for placement of electric producing machines powered by wind:

1.5 mile setbacks from dwellings in resource zones, with an option to grant a waiver.

1.5 mile setbacks from all non-resource zone lands with NO waivers.

Strong protection for the Columbia River Gorge and the National Scenic Area. Protecting the National Scenic Area will provided added protection to our community.

The quality of life of Wasco County citizens is of primary importance. To ignore their environmental and real estate values is more important than the production of energy in a manner that would ignore those qualities. I believe that until we have created maximum efficiency in the use of currently generated electricity we need not threaten the quality of life of any of the county's residents.
